

FINGERS is a work-in-progress Python web application that maps a string instrument's fingerboard and suggests the best fingering for any chord or musical fragment input by the user or detected from an uploaded screenshot.

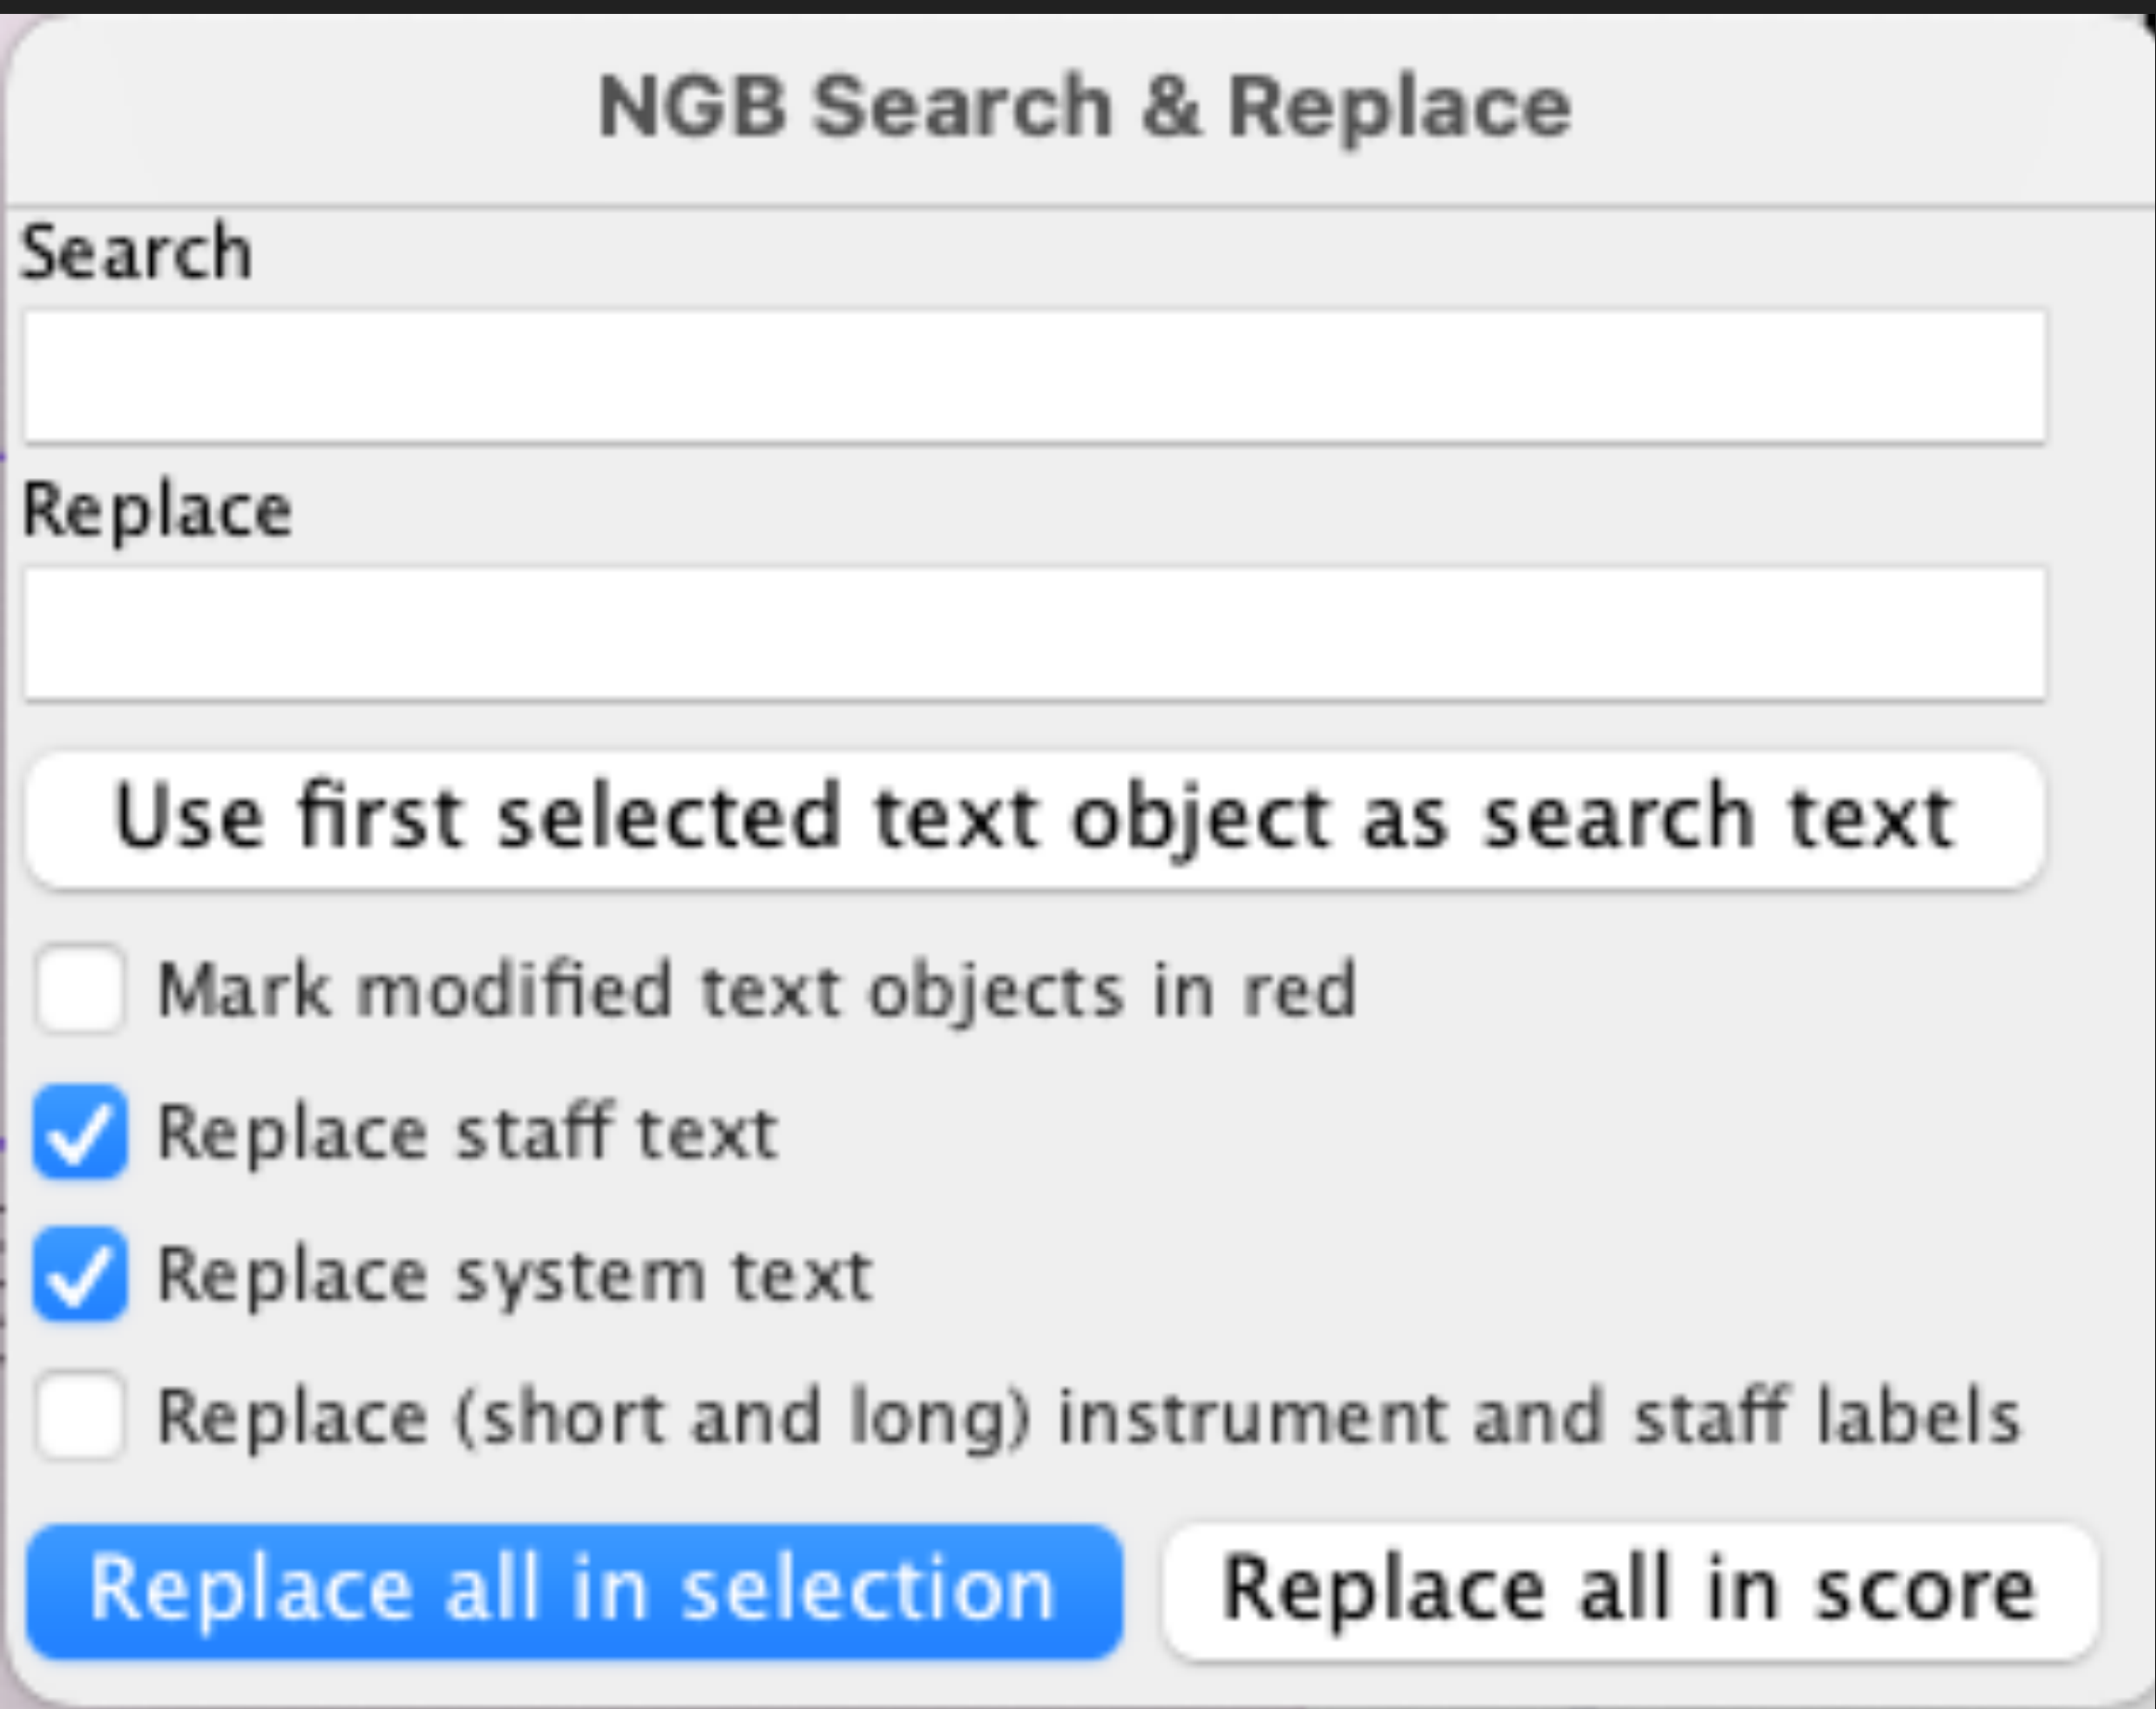

It's also a valuable tool for songwriters and composers, helping them verify and refine their string section scoring with ease.

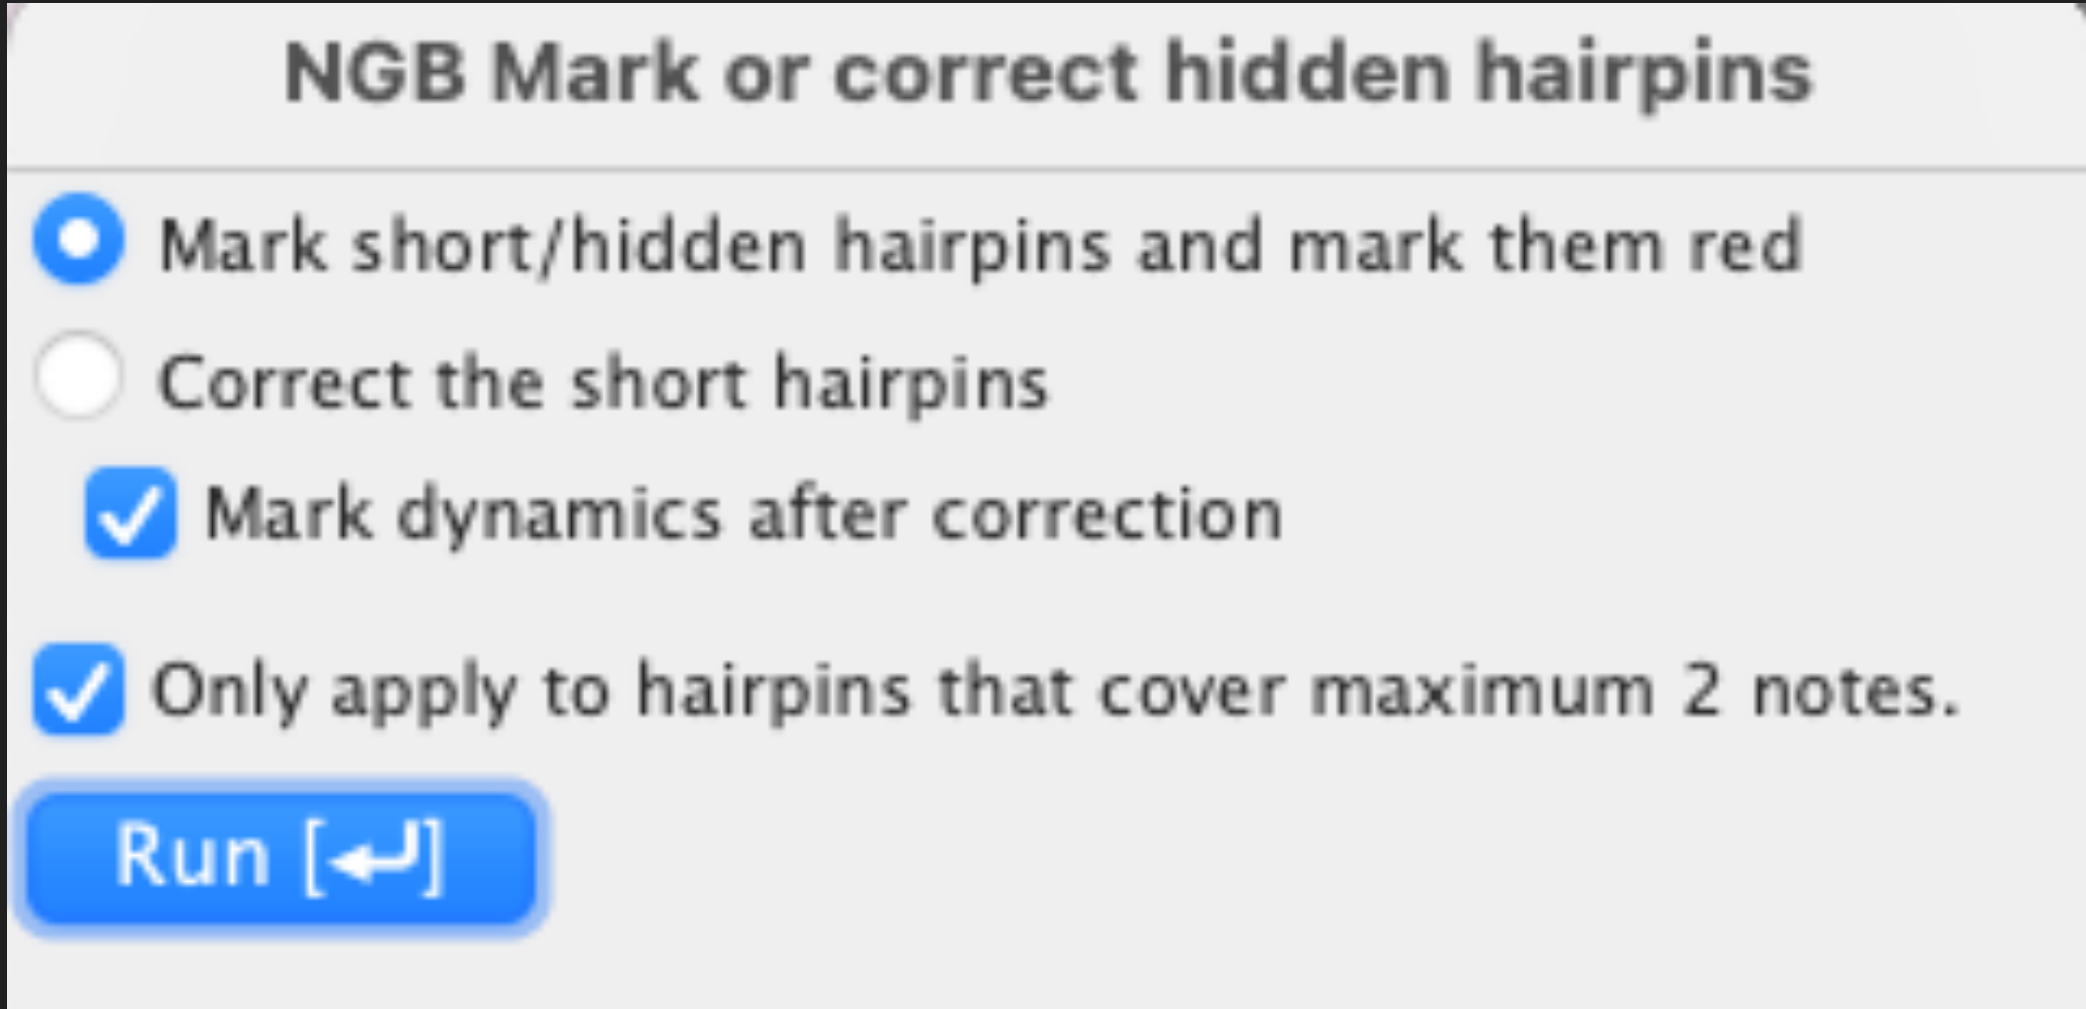

Sibelius® Plugins - (selected)

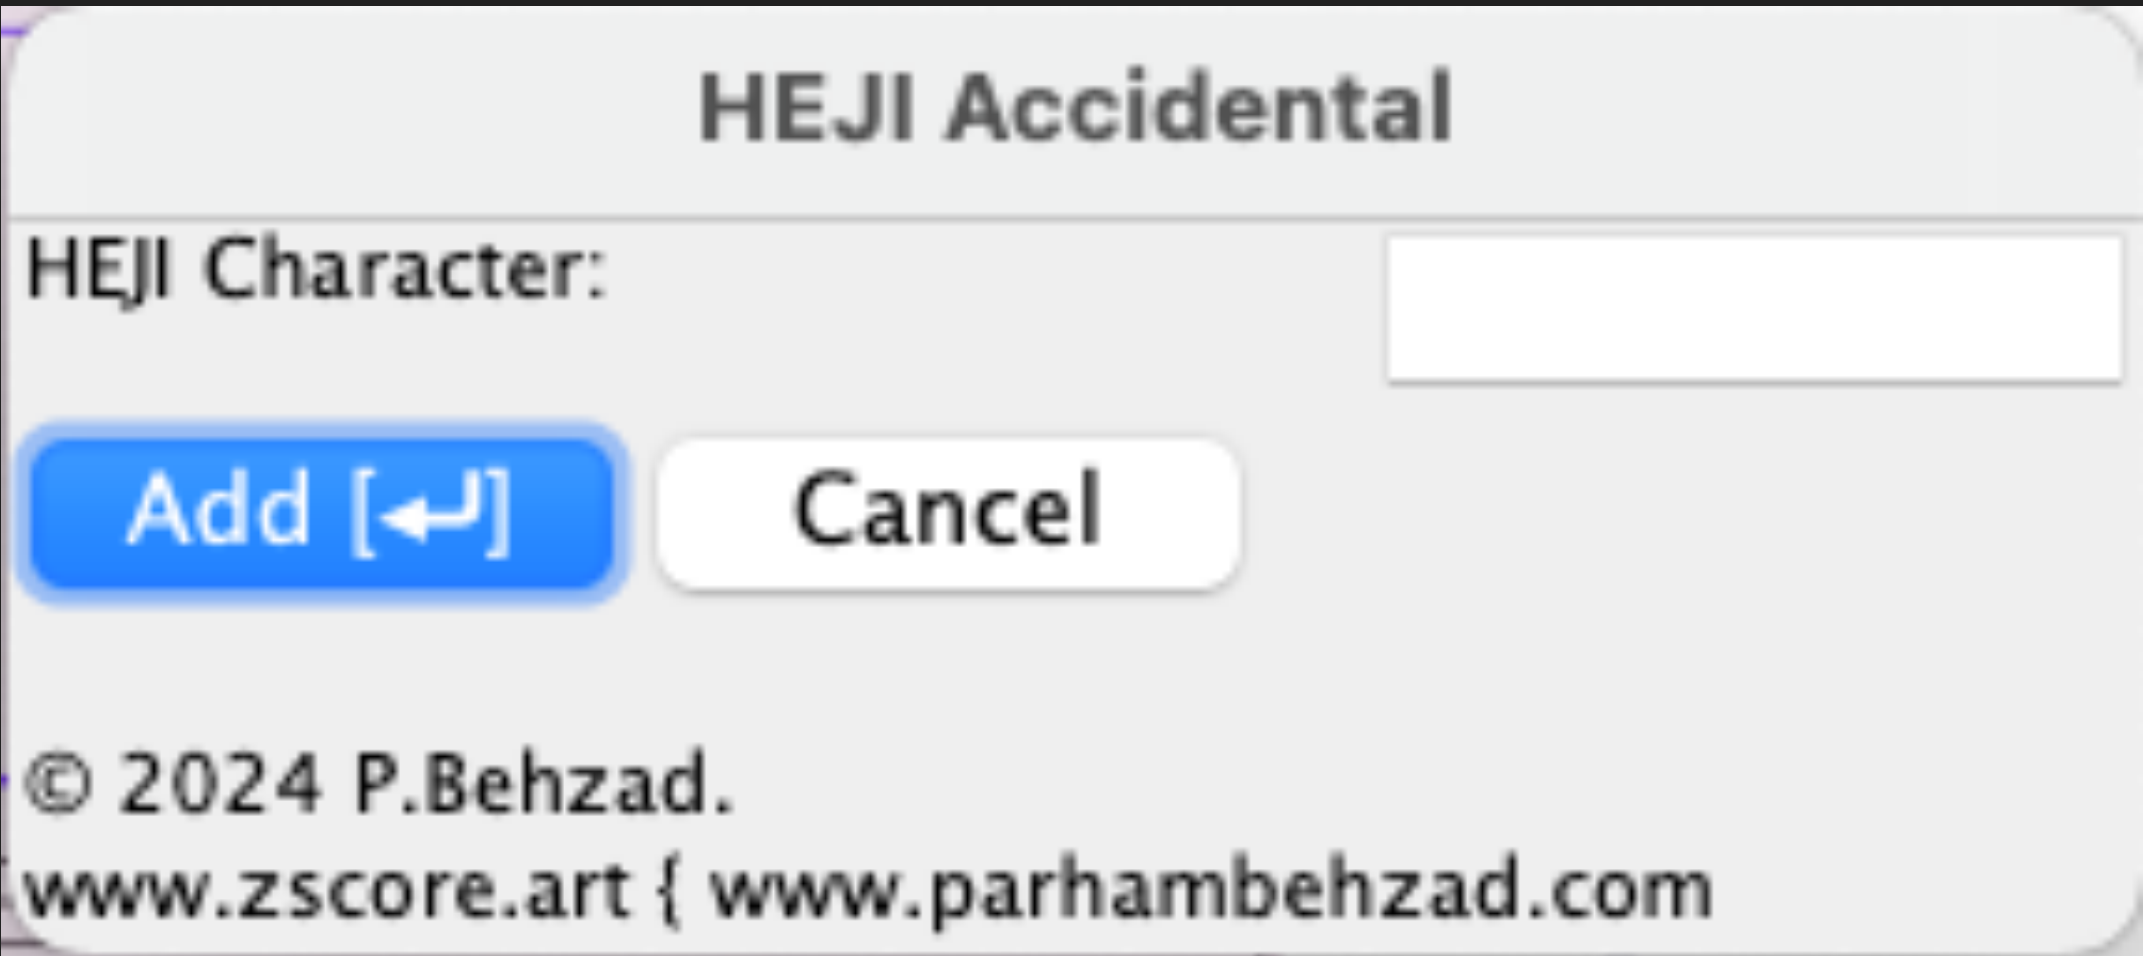

Importing layout from another score and force it to the current score

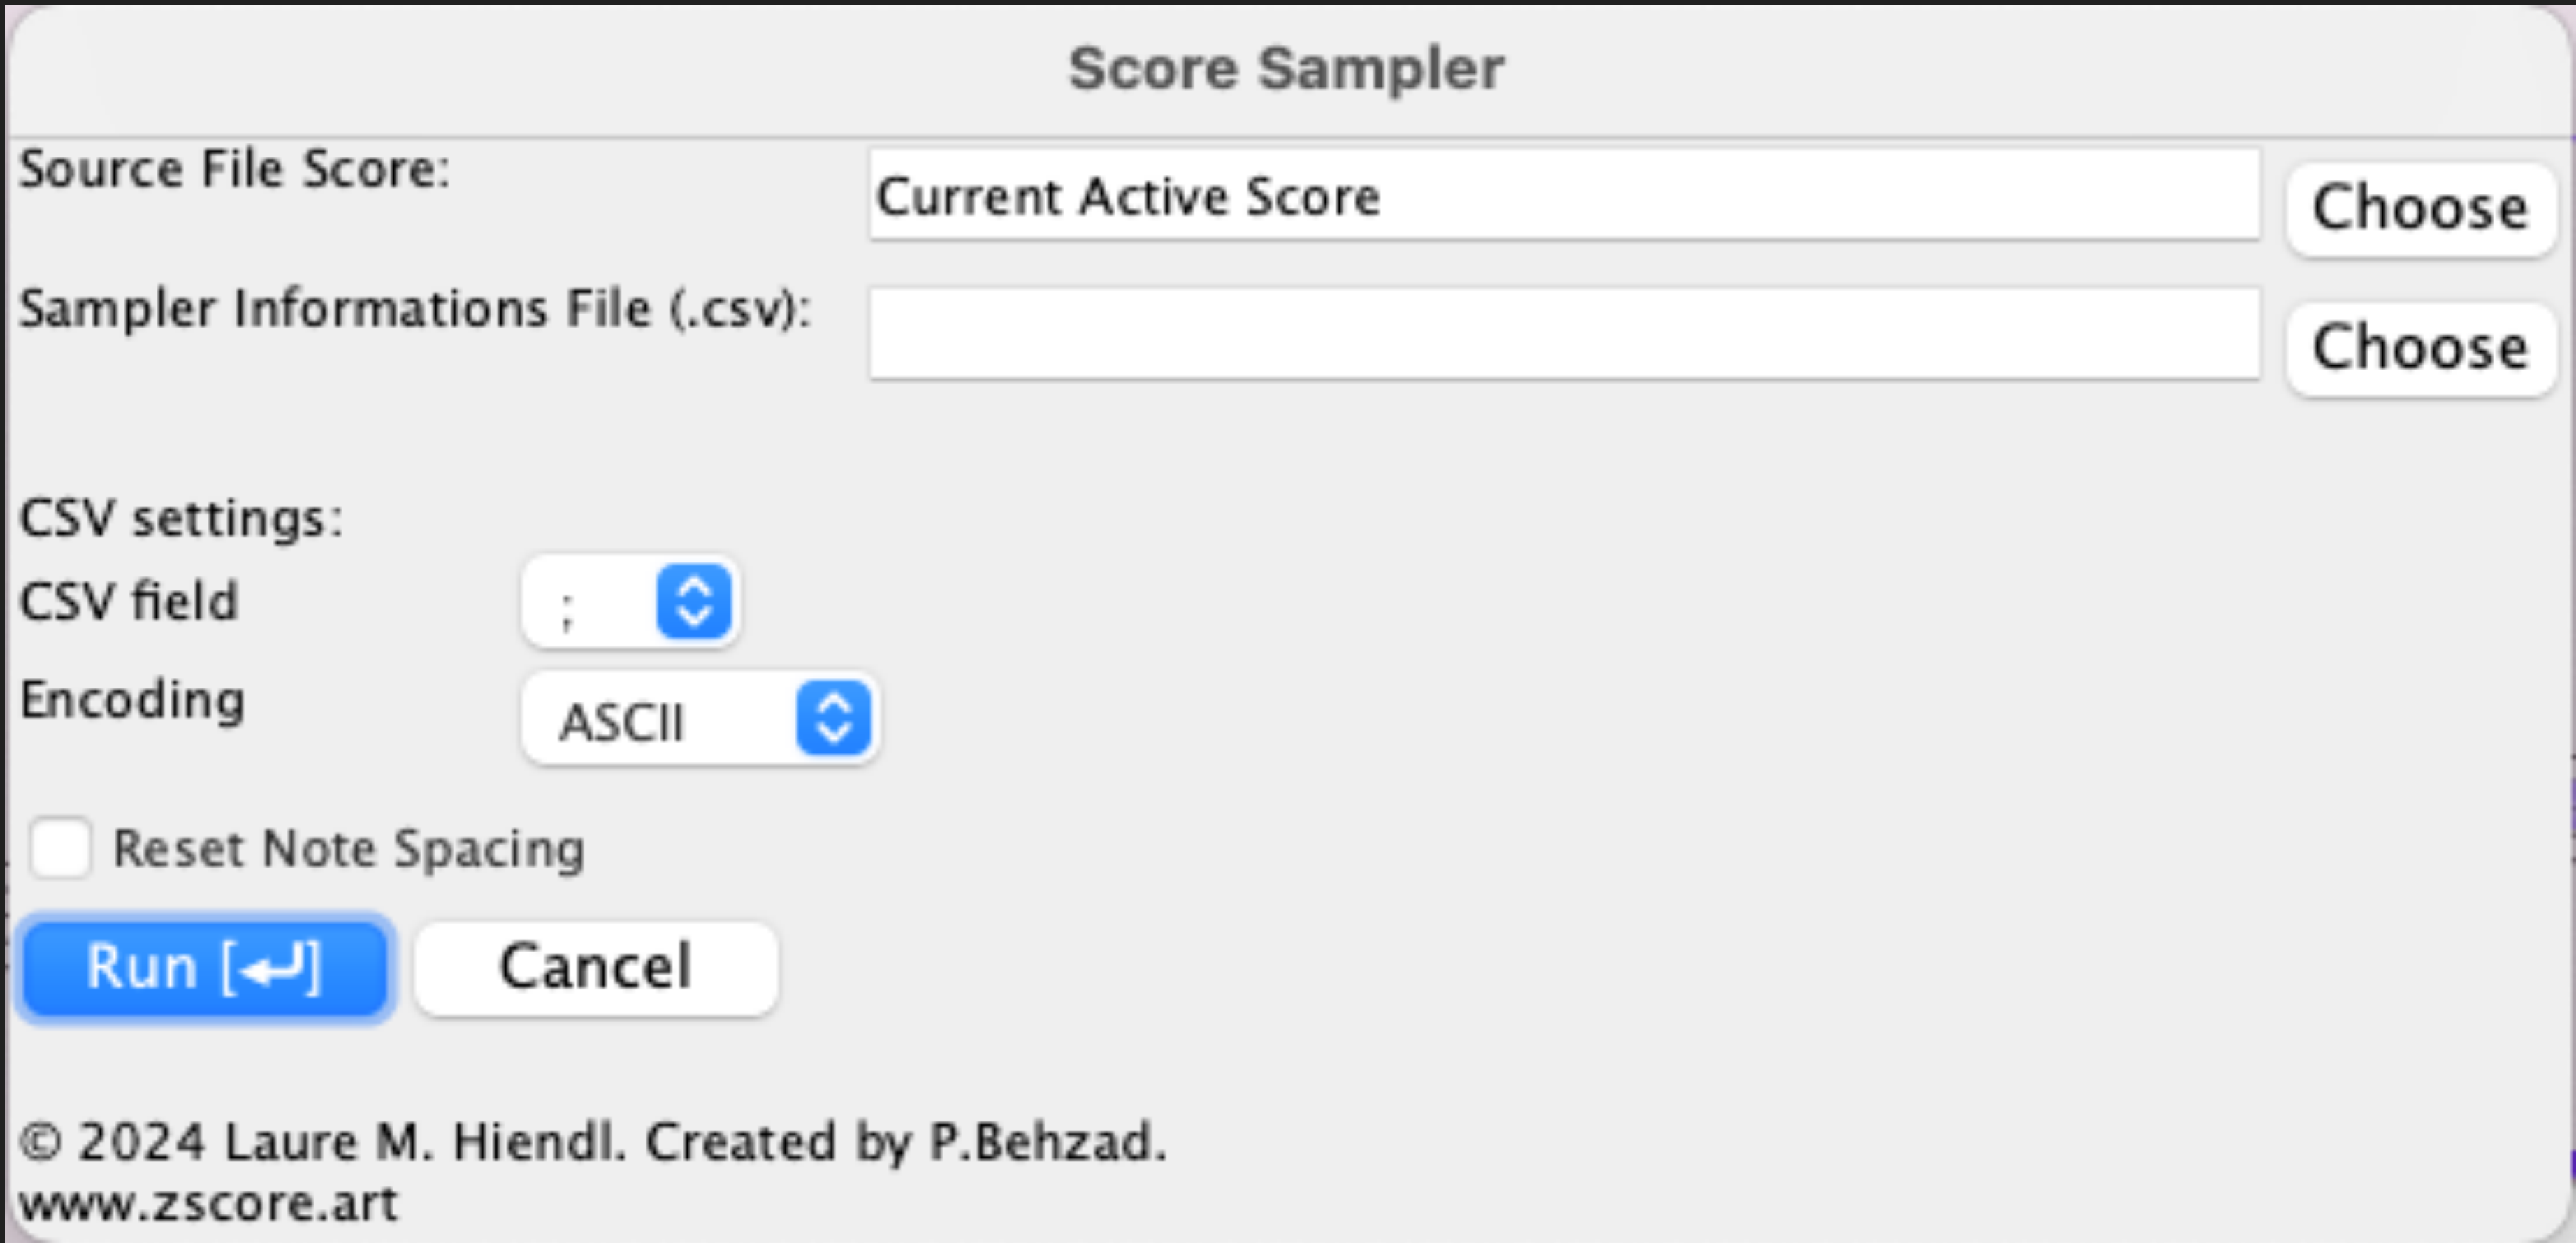

Simple find and replace for any text object in the score

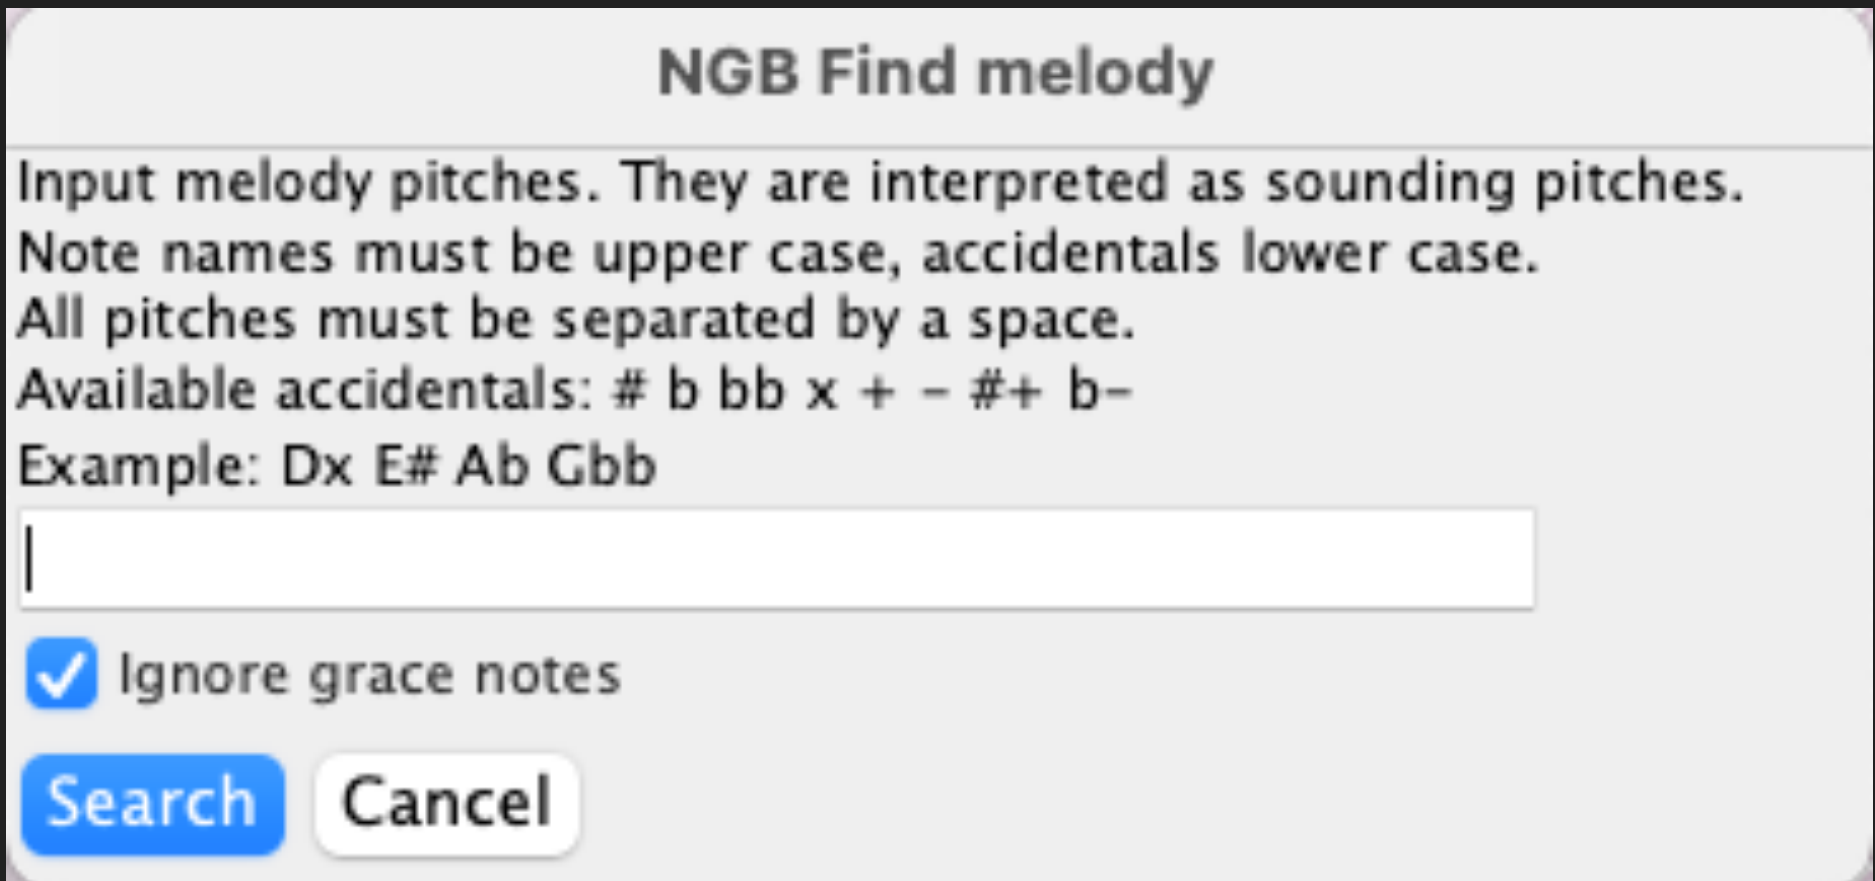

Correcting bad hairpins

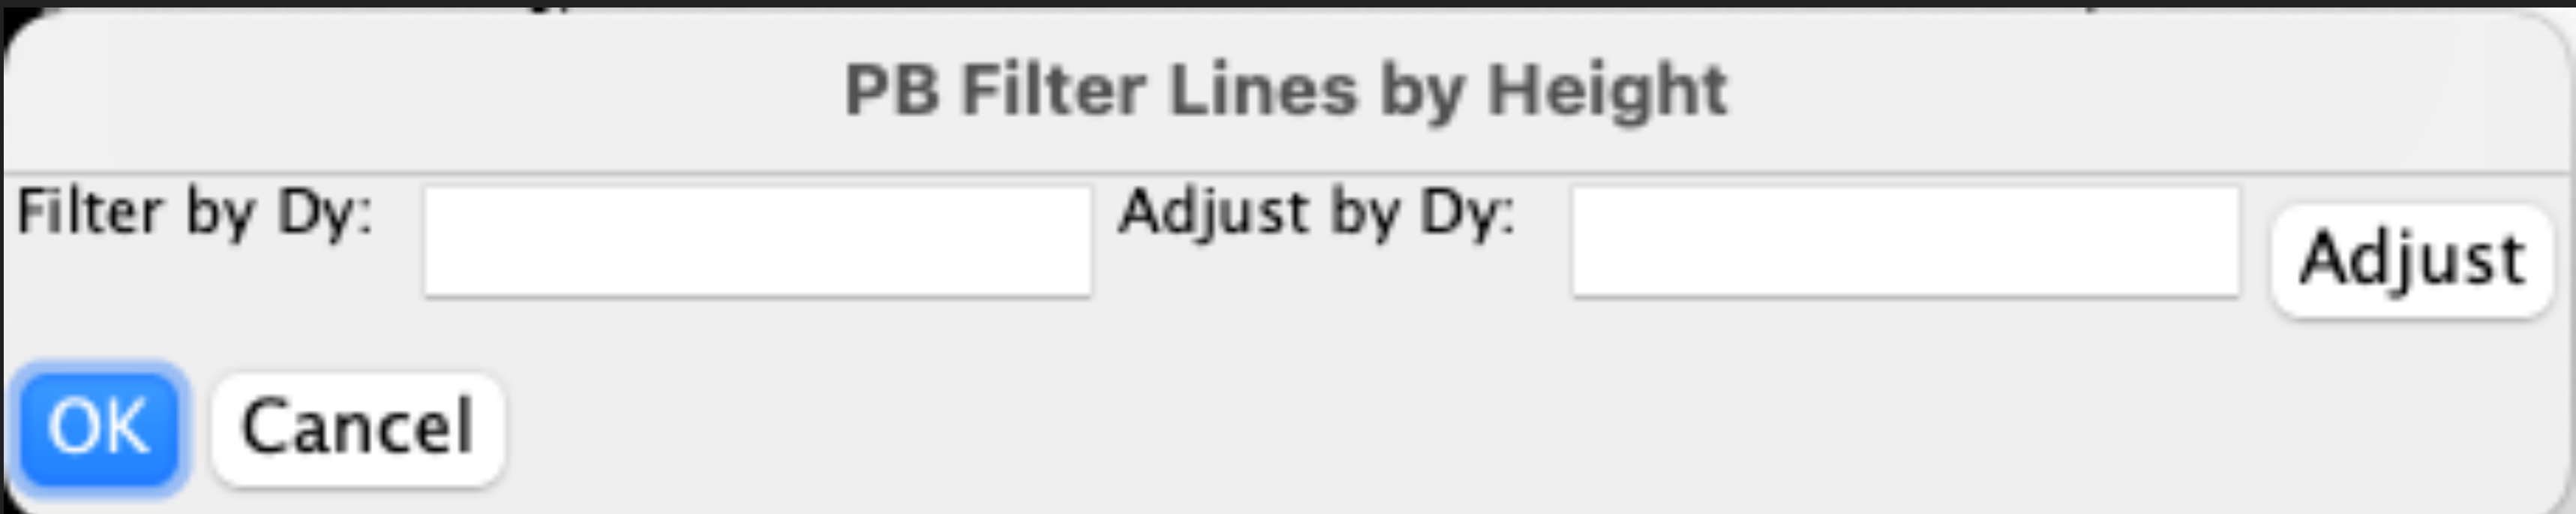

Adding variety of microtonal accidentals (HEJI) to notes in the fastest way possible.

Commissioned by composer Dr. Laure M. Hiendl for his own compositions

A Find function for melodies

Filter Lines by their hight
